

ABSTRACT OF THE DISCLOSURE

METHOD FOR A UTILITY PROVIDING ELECTRICITY VIA CLASS OF SERVICE

The present invention provides a system and method for a utility or a service vendor to provide electricity via a class of service. The system and method provide a mechanism by which power is supplied to customers via prioritized classes of importance wherein the point of utilization communicates with the electrical power supply network and provides information for the utility to determine whether or not power needs to be supplied to a specific outlet or appliance during various electrical demand or rate periods.
